Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2017.

**Introduction:**

Varex Imaging Corporation (the “Company” or “Varex”), a Delaware corporation formed in 2016, designs, manufactures, sells and services a broad range of X-ray imaging components, including X-ray tubes, digital detectors and accessories, high voltage connectors, high-energy inspection accelerators, image processing software and workstations, computer-aided diagnostic software, collimators, automatic exposure control devices, generators, ionization chambers and buckys, for use in a range of applications, including radiographic or fluoroscopic imaging, mammography, special procedures, computed tomography, radio therapy and computer-aided detection. The Company sells its products to imaging system original equipment manufacturer (“OEM”) customers for incorporation into new medical diagnostic, radiation therapy, dental, veterinary and industrial imaging systems, to independent service companies, distributors and directly to end-users for replacement purposes.

The Company also designs, manufactures, sells and services industrial products, which include Linatron® X-ray accelerators, imaging processing software and image detection products for security and inspection purposes, such as cargo screening at ports and borders, airports, and nondestructive examination in a variety of applications. The Company generally sells security and inspection products to OEM customers who incorporate Varex’s products into their inspection systems. The Company conducts an active research and development program to focus on new technology and applications in both the medical and industrial X-ray imaging markets.

## Item 1.01. Conflict Minerals Disclosure and Report

The Company has concluded in good faith that during 2017,

- a. The Company has manufactured and contracted to manufacture products as to which “conflict minerals” (as defined in Section 1, Item 1.01 (d) (3) of Form SD) are necessary to the functionality or production of such products.
- b. Based on a “reasonable country of origin inquiry”, the Company knows or has reason to believe that a portion of its necessary conflict minerals originated or may have originated in the Democratic Republic of the Congo or an adjoining country (collectively, sometimes referred to as the “Covered Countries”). Further the Company has determined that smelters and refiners identified as sourcing from the Covered Countries have been audited by the Responsible Minerals Initiative (RMI) and validated as “compliant”.

The Company’s reasonable country of origin inquiry employed a combination of measures to determine whether the necessary conflict minerals in any of the Company’s products originated from the Covered Countries. The Company’s primary means of determining country of origin of necessary conflict minerals was by conducting a supply-chain survey with direct vendors using the Responsible Business Alliance/Global e-Sustainability Initiative (RBA/GeSI) Conflict Minerals Reporting Template. The Company surveyed its direct vendors that were determined to have or had a high likelihood of containing tin, tantalum, tungsten or gold in their products. Additionally, the Company used the RMI website (<http://www.responsiblemineralsinitiative.org/>), smelter company websites, and other online tools to provide additional country of origin information.

Below is a summary of the information collected from all supply-chain survey respondents.

<b>Conflict Mineral</b>	<b>Countries of Origin</b>
Gold	Benin, Bolivia, Burkina Faso, Canada, Chile, Colombia, Ecuador, Eritrea, Ghana, Guatemala, Guinea, Guyana, Honduras, Mali, Nicaragua, Panama, Peru, Russian Federation, Senegal, Togo, United States, South Africa
Tantalum	Australia, Bolivia, Brazil, Colombia, China, Ethiopia, France, Guinea, Guyana, India, Kazakhstan, Madagascar, Malaysia, Namibia, Nigeria, Russian Federation, Sierra Leone, Thailand, United States, Zimbabwe, Mozambique, Burundi, Rwanda, Democratic Republic of the Congo*
Tin	Argentina, Australia, Bolivia, Brazil, China, Colombia, Germany, Indonesia, Laos, Malaysia, Mongolia, Myanmar, Nigeria, Peru, Portugal, Russian Federation, Thailand, United Kingdom, Vietnam, Zimbabwe, Burundi, Rwanda, Uganda, Democratic Republic of the Congo*
Tungsten	Australia, Austria, Bolivia, Brazil, Cambodia, Canada, China, Colombia, Japan, Mexico, Mongolia, Nigeria, Portugal, Russian Federation, Spain, United Kingdom, United States, Uzbekistan, Viet Nam, Burundi, Rwanda, Democratic Republic of the Congo*

*\*The reported tantalum from the DRC came from 6 smelters, reported tin from DRC came from 2 smelters, and reported tungsten from DRC came from 2 smelters all of which have been audited and validated as “compliant” by the RMI, which is internationally recognized for conflict free validation audits.*

## Conflict Minerals Disclosure

In accordance with Rule 13p-1 under the Securities Exchange Act of 1934, the Company has filed this Specialized Disclosure Form (Form SD) with the Securities and Exchange Commission and the associated Conflict Minerals Report and both documents are posted to a publicly available Internet site at <https://www.vareximaging.com/legal-information>.

## Item 1.02. Exhibits

Conflict Minerals Report required by Item 1.01 is attached as Exhibit 1.01.

## Item 2.01. Exhibits

1.01. Conflict Minerals Report as required by Items 1.01 and 1.02.

\* \* \* \* \*

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Corporate Secretary

**Varex Imaging Corporation**  
**CONFLICT MINERALS REPORT**  
**FOR THE YEAR ENDED DECEMBER 31, 2017**

This report for the year ended December 31, 2017 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”).

I. Overview

a. Company Overview

Varex Imaging Corporation (the “Company,” “Varex,” “we,” or “our”), a Delaware corporation formed in 2016, designs, manufactures, sells and services a broad range of X-ray imaging components, including X-ray tubes, digital detectors and accessories, high voltage connectors, high-energy inspection accelerators, image processing software and workstations, computer-aided diagnostic software, collimators, automatic exposure control devices, generators, ionization chambers and buckys, for use in a range of applications, including radiographic or fluoroscopic imaging, mammography, special procedures, computed tomography, radio therapy and computer-aided detection. The Company sells its products to imaging system original equipment manufacturer (“OEM”) customers for incorporation into new medical diagnostic, radiation therapy, dental, veterinary and industrial imaging systems, to independent service companies, distributors and directly to end-users for replacement purposes.

The Company also designs, manufactures, sells and services industrial products, which include Linatron® X-ray accelerators, imaging processing software and image detection products for security and inspection purposes, such as cargo screening at ports and borders, airports, and nondestructive examination in a variety of applications. The Company generally sells security and inspection products to OEM customers who incorporate Varex’s products into their inspection systems. The Company conducts an active research and development program to focus on new technology and applications in both the medical and industrial X-ray imaging markets.

b. Product Overview

Our Chief Executive Officer, who is our Chief Operating Decision Maker (“CODM”), evaluates the product groupings and measures the business performance in two reportable operating segments: Medical and Industrial. The segments align our products and service offerings with customer use in medical and industrial markets and are consistent with how the CODM evaluates the business for the allocation of resources. The CODM allocates resources to and evaluates the financial performance of each operating segment primarily based on revenues and gross margin.

**Medical.** In our Medical business segment, we design, manufacture, sell and service X-ray imaging components for use in a range of applications, including radiographic and fluoroscopic imaging, mammography, computed tomography (“CT”), radiation therapy and computer-aided detection. We provide a broad range of X-ray imaging components for medical customers, including X-ray tubes, digital flat panel image detectors, high voltage connectors, image-processing software and workstations, computer-aided diagnostic software, collimators, automatic exposure control devices, generators, ionization chambers and buckys.

Our X-ray imaging components are primarily sold to imaging system original equipment manufacturer (“OEM”) customers that incorporate them into their medical diagnostic, radiation therapy, dental and veterinary imaging systems. To a much lesser extent, we also sell our X-ray imaging components to independent service companies, distributors and directly to end-users for replacement purposes

**Industrial.** In our Industrial business segment, we design, manufacture, sell and service products for use in security and industrial inspection applications, such as airport security screening at ports and borders and nondestructive testing in a variety of applications. The products include Linatron X-ray accelerators, X-ray

tubes, digital flat panel detectors, high voltage connectors and image-processing software that we generally sell to OEM customers that incorporate these products into their inspection systems.

c. Supply Chain Overview

The Company's supply chain is complex, and there are multiple tiers between the Company and the mine. The Company relies on the Company's vendors to provide information on the origin of the conflict minerals contained in components that are included in the Company's products. The Company validates vendor's information as complete and reasonable using a check sheet, and any concerns are sent back to the vendor to address.

II. Reasonable Country of Origin Inquiry (RCOI) and Due Diligence Measures

For reporting year 2017, to identify and assess risk in the supply chain, the Company engaged those vendors who provide the substantial majority of the Company's components and products of which the Company believes are likely to contain conflict minerals. The Company conducted a supply chain survey, using the Responsible Minerals Initiative's (RMI) Conflict Minerals Reporting Template (CMRT), of these vendors to determine whether the necessary conflict minerals in components contained in the Company's products were or were not "DRC conflict free" (as defined in the Rule). The survey requested vendors to identify smelters and refiners and country of origin of the conflict minerals they provide to the Company.

The Company's due diligence measures have been designed to conform, in all material respects, to the framework in the Organization for Economic Co-operation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas Third Edition (OECD 2016) and related Supplements for tantalum, tin, tungsten and gold ("3TG"). In accordance with the OECD 5 Step Framework, the Company's due diligence exercise included:

(1) Establish strong company management systems

The Company's Conflict Minerals Team includes key members of the Global Supply Chain Management team in each business unit worldwide. The Company's requirements for vendor conflict minerals management are contained in the Company's vendor training material and in the Conflict Minerals Policy. The Conflict Minerals Policy is posted on the Company's external website and is referenced in POs and supplier contractual agreements. The Conflict Minerals Team planned and executed the due diligence methods necessary to complete a RCOI, determined the risk associated with the use of conflict minerals, established steps to mitigate risks, and reported on supply chain due diligence. The RMI researches known smelters, conducts audits of smelters, and publishes the results of this activity in databases which the Company uses to determine country of origin and assess risk in the supply chain.

(2) Identify and assess risks in the supply chain

The Company identified 419 vendors to be in-scope, based on the probability of 3TG in their products, and the Company requested a completed Conflict Minerals Reporting Template (CMRT) from all the in-scope vendors. The Company received 345 CMRTs, which represent approximately 80% of in-scope vendors, including the names and locations of smelters and refiners which process conflict minerals used in components provided by the Company's vendors. The smelter information provided by the suppliers allowed the Company to determine the mine or country of origin of the conflict minerals. The Company evaluated the information collected, including subjecting the results to a detailed quality review checklist. If discrepancies, errors, or omissions were identified, the response for that vendor was deemed incomplete and was returned for correction by the vendor. Approximately 75% of the CMRTs collected were acceptable as received or successfully corrected by the vendor and accepted by the Company. The Company reviewed and compared the responses with other information in the Company's possession and, where appropriate, made further inquiries of the Company's vendors. The Company contacted vendors that did not respond by a specified date and sent reminder emails requesting their responses.

(3) Design a Strategy to Respond to Identified Risk in the Supply Chain.

The Company completes a risk assessment after collecting data from the in-scope vendors to identify Supply Chain risks incurred during the current reporting year. The Company has a process for determining risk using a set of standard risk factors. Supply Chain risks include risk associated with each vendor and the risk associated with

each smelter or refiner (SOR) identified by the vendors. RMI RCOI Data and RMI Smelter Database data is used extensively to determine appropriate risk mitigation factors. For each risk factor a possible course of action is determined, and appropriate risk mitigation actions are provided to vendors. A summary of results and identified risks are published in a Reporting Year year-end report. The risk factors identified during this process are subsequently managed by the Varex risk management system, and appropriately acted upon.

(4) Carry out independent third-party audit of supply chain due diligence at identified points in the supply chain.

The RMI has a documented process called the Responsible Minerals Assurance Process (RMAP) which includes auditing of SORs and other activities. The results of these audits are reviewed by the RMI and made publicly available for companies to reference. The Company uses the results of these independent third-party audits.

(5) Report on supply chain due diligence.

This Conflict Minerals Report constitutes the Company's annual report on the Company's 3TG due diligence, is filed with the SEC, and is available on the Company's website at <insert URL>.

### III. Improvements Planned

(1) Continuously communicate the Company's expectation on conflict minerals to vendors based on identified risks. This year the Company developed a Conflict Mineral Policy and made the policy publicly available on their website.

(2) Work with vendors who distribute other company's goods to obtain a list of manufacturers and CMRTs, and improve the quality of RCOI data coming from those sources. During this reporting year (RY17) many of these manufacturers were identified. It is expected that this action will result in improved results next reporting year.

(3) Work with vendors from countries outside US SEC jurisdiction to improve the quality of data.

(4) Continue to improve the response rate of vendors.

### IV. Determination

The Company relies on its vendors to obtain complete and accurate conflict minerals information and cannot guarantee the complete accuracy of all data. However, the Company worked in good faith to achieve a reasonable level of accuracy and completeness.

The Company's due diligence identified 321 SORs which have been identified as SORs per the Responsible Minerals Assurance Process (RMAP) definitions by the RMI (see Appendix A). The RMAP is a set of protocols maintained and used by the RMI and companies cooperating on due diligence and country of origin inquiry. The RMI has performed independent third-party audits on many of these SORs and is pursuing audits for the remaining SORs.

**Facilities Used to Process Necessary Conflict Minerals Used in In-Scope Products:** While the Company has conducted thorough due diligence, and worked closely with its vendors to survey the conflict minerals supply chain (as described above), the Company is not able to identify with reasonable certainty all facilities used to process necessary conflict minerals used in in-scope products. However, based on the information acquired through the due diligence process, the Company believes that the facilities that may have been used to process the 3TG necessary to the functionality of production of in-scope products include the smelters and refiners listed in Appendix A.

**Information About Country of Origin of Necessary Conflict Minerals Used in In-Scope Products:** While the Company has conducted a thorough due diligence and worked closely with its vendors to survey the supply chain (as described above), the Company is not able to determine with reasonable certainty the countries of origin of 3TGs used in all in-scope products or whether the 3TG in all in-scope products are from recycled or scrap sources.

However, the Company has so far identified the countries of origin shown in the following table:

<b>Conflict Mineral</b>	<b>Countries of Origin</b>
Gold	Benin, Bolivia, Burkina Faso, Canada, Chile, Colombia, Ecuador, Eritrea, Ghana, Guatemala, Guinea, Guyana, Honduras, Mali, Nicaragua, Panama, Peru, Russian Federation, Senegal, Togo, United States, South Africa
Tantalum	Australia, Bolivia, Brazil, Colombia, China, Ethiopia, France, Guinea, Guyana, India, Kazakhstan, Madagascar, Malaysia, Namibia, Nigeria, Russian Federation, Sierra Leone, Thailand, United States, Zimbabwe, Mozambique, Burundi, Rwanda, Democratic Republic of the Congo*
Tin	Argentina, Australia, Bolivia, Brazil, China, Colombia, Germany, Indonesia, Laos, Malaysia, Mongolia, Myanmar, Nigeria, Peru, Portugal, Russian Federation, Thailand, United Kingdom, Vietnam, Zimbabwe, Burundi, Rwanda, Uganda, Democratic Republic of the Congo*
Tungsten	Australia, Austria, Bolivia, Brazil, Cambodia, Canada, China, Colombia, Japan, Mexico, Mongolia, Nigeria, Portugal, Russian Federation, Spain, United Kingdom, United States, Uzbekistan, Viet Nam, Burundi, Rwanda, Democratic Republic of the Congo*

*\*The reported tantalum from the DRC came from 6 smelters, reported tin from DRC came from 2 smelters, and reported tungsten from DRC came from 2 smelters all of which have been audited and validated as “compliant” by the RMI, which is internationally recognized for conflict free validation audits.*

**Information about Efforts to Determine Mine or Location of Origin:** The description of Company’s due diligence exercise set forth above under the heading “Reasonable Country of Origin (RCOI) and Due Diligence Measures” covers Company’s efforts to determine the mine or location of origin with the greatest possible specificity.
