

Waygate Technologies and Varex Imaging Announce Exclusive Partnership to Accelerate the Transformation of Field Radiography to Digital

- *Agreement to expand Waygate Technologies' offering in portable digital radiography detectors*
- *Varex Imaging detector technology, including hardware and software, joins the distribution and services network of Waygate Technologies*
- *Partnership advances film-to-digital transition in field radiography*

Huerth, Germany and Salt Lake City, UT – October 7, 2026 – Waygate Technologies, a market leader in non-destructive testing (NDT) solutions for industrial and energy infrastructure inspection, and Varex Imaging, a global leader in X-ray imaging components and detector technology, have signed an official partnership agreement to enhance their offering of advanced digital field radiography solutions. As part of the partnership, Waygate Technologies will become the exclusive distributor of Varex industrial X-ray detectors developed for field radiography applications. This leverages Varex Imaging's proven detector expertise and technology leadership to accelerate the adoption of digital field radiography. Varex Imaging in return gains access to the vast international distribution and services network of Waygate Technologies across numerous industrial sectors.

The strategic alliance between the two companies aims to transform the field radiography segment from traditional film to advanced digital radiography (DR). By creating a comprehensive one-stop-shop for digital detectors, software and services, both partners will modernize industrial inspection workflows and increase efficiency in field radiography. Digital radiography offers superior image quality, faster turnaround times, and improved data management compared to traditional film, enabling customers to enhance the safety of their assets while reducing downtime and streamlining reporting processes.

"Waygate Technologies is proud to marry our NDT and deep sector expertise with Varex Imaging's leading flat panel and flexible detector technologies, which have set a new benchmark for performance and usability in digital field

radiography”, said Gwen Pabst-Kroezen, General Manager of Imaging Solutions at Waygate Technologies.

“Field radiography presents unique technical challenges, from portability and robustness to delivering consistent high-quality imaging performance in demanding environments”, commented Jesse Merkley, Senior Vice President Industrial Business at Varex Imaging. “This partnership brings our unique detector technology together with Waygate Technologies’ application expertise to address these challenges and help move the industry decisively from film to digital.”

Seamless Customer Transition and New Weldpack Pro Digital Weld Solution

The partnership will go into effect immediately. Existing customers of Varex Imaging field radiography business will be informed of the partnership and supported through a structured transition process to Waygate Technologies customer and services channels, supported by a comprehensive conversion plan. As part of the partnership, Waygate Technologies will assume global after-sales service and training responsibilities, allowing Varex Imaging to focus resources on detector platform innovation and next-generation industrial imaging technologies.

In a first joint effort under the partnership, the companies are launching a new package solution for weld inspection of any pipe size, called Weldpack Pro. Designed to preserve the simplicity and familiarity of film-based radiography workflows while delivering the advantages of a digital solution. The Weldpack Pro combines options for two sizes of a new bendable detector and a new small size flat panel detector to offer reliable weld inspections on smaller pipes than before, at low-operational rather than investment-costs.

The Weldpack Pro will be unveiled to the public for the first time at the ASNT Conference and Expo, which will take place October 12–15 in Columbus, Ohio. Interested visitors and customers can stop by the Waygate Technologies booth, No. 413, to learn more about the new partnership with Varex and the Weldpack Pro solution.

About Waygate Technologies

Waygate Technologies is an industrial inspection solutions provider and world leader in nondestructive testing (NDT). We ensure safety, quality and productivity combining more than 130 years of experience and a collection of heritage product brands including Krautkrämer, Phoenix, Seifert, Everest and Agfa NDT. Today, hundreds of brands in the energy, oil & gas, battery, electronics, aerospace, automotive, and transport industries trust our technologies. We drive digital transformation through cloud-based and AI-enhanced tools as well as our broad portfolio of award-winning solutions in industrial radiography and computed tomography (CT), remote visual inspection (RVI), ultrasound (UT), and robotic inspection. Waygate Technologies is part of the Industrial Products portfolio within the Industrial & Energy Technology business segment of Baker Hughes (NASDAQ: BKR). *Inspection starts with us:* waygate-tech.com

About Varex Imaging

Varex Imaging Corporation is a leading innovator, designer, and manufacturer of X-ray imaging components, which include X-ray tubes, digital detectors, and other image processing solutions that are key components of X-ray imaging systems. With a 70+ year history of successful innovation, Varex's products are used in medical imaging as well as in industrial and security imaging applications. Global OEM manufacturers incorporate the company's X-ray sources, digital detectors, connecting devices, and imaging software in their systems to detect, diagnose, protect, and inspect. Headquartered in Salt Lake City, Utah, Varex

employs approximately 2,300 people located in North America, Europe, and Asia.
